21:00 horas

SEPTEMBER 20TH 2024

TECHNOLOGICAL SOVEREIGNTY

As technology advances and becomes increasingly relevant in practically all aspects of life, technological sovereignty emerges as an essential element that allows countries to make decisions autonomously, without depending on third parties, based on their capabilities and forging alliances with trusted countries. In this sense, the protection of technology can have a significant impact on them to access key technologies, promote innovation, and protect their strategic interests.
